Thank you, Chair Hixson, Vice-Chair Rosenberg, Del. Reznik, and all the members of the Ways and Means Committee for inviting me to testify at today’s hearing on “Registration and Voting at Polling Places.”

My name is Allegra Chapman, and I’m Counsel at Demos. Demos is a non-partisan public policy center, founded in 2000, that works with advocates and policy makers in pursuit of a vibrant democracy with high levels of voting and civic engagement. Achieving this level of inclusivity requires reducing barriers – such as arbitrary registration cut-off deadlines – that prevent all eligible citizens from casting a ballot on Election Day. To this end, Demos’ Democracy Program is engaged in a long-term campaign to work with state advocates and election officials, along with legislative offices, to support enactment of Election Day Registration (EDR) – a proven reform to substantially increase voter turnout among eligible voters without compromising the integrity of elections or substantially increasing costs.

By passing this proposed constitutional amendment, and laying the groundwork to enact EDR, Maryland would become the 11th state to permit eligible citizens to both register and vote on the same day. To date, eight states have enacted Election Day Registration; two have passed Same Day Registration (SDR), permitting eligible voters to register and vote during an early-voting period; and one state has no statewide registration requirement at all. All these states have shown increased voter turnout, with minimal costs and no compromise to the electoral system.

The requirement to register well in advance of an election proves onerous to many groups, including young people, low-income populations, frequent movers, and people of color. It’s no surprise that this is the case: when you have just moved to a new school, or are jumping from one job to the next while raising a family, registering to vote a month in

---

1 Eight states with EDR are Idaho, Iowa, Maine, Minnesota, Montana, New Hampshire, Wisconsin, and Wyoming.
3 North Dakota has no statewide voter registration requirement.
advance of an election may not be at the forefront of one’s to-do list. This hurdle is compounded by the fact that the “percentage of people giving ‘quite a lot’ of thought to U.S. presidential elections rises dramatically in the final four weeks prior to the election, just at the time when registration no longer is possible in approximately half the states.”

Many voting rights experts agree that pre-Election Day registration deadlines have contributed to lower turnout among eligible voters in the United States. By contrast, in EDR states the numbers are much better: whereas 57.3% percent of the voting aged population turned out to vote in non-EDR states in 2008, 66.3% voted in EDR states. The 2000 election – a less-historic event that’s better representative of most general elections – fared worse: 50.5% of the voting aged population voted in non-EDR states in 2000, and 65.6% voted in EDR states. That’s a significant difference, and testament to EDR’s ability to raise the numbers. Studies show that “if all states transitioned to EDR . . . the national registration rate would increase to almost 82%, a 6% increase over the current national voter registration rate [of 76%].”

**Benefits of Election Day Registration**

Election Day Registration makes the process of registering and voting easier – and thus increases voter turnout. EDR states as a group tout an average voter turnout rate of 10 to 12 percentage points higher than non-EDR states. Academic studies show that a significant part of this difference is directly attributable to EDR, with the elimination of arbitrary registration deadlines increasing turnout by a full three to six percentage points.

(1) **EDR boosts turnout**

Over a million Americans used EDR/ SDR to vote on or before November 4, 2008. In the nine states that permitted registration and voting on the same day during that election – the District of Columbia had not yet enacted the reform – voter turnout was seven

---

7 Supra, Alvarez, Ansolabehere, and Wilson, at 15.

percentage points higher than in non EDR/ SDR states.\textsuperscript{10} The five states with the highest turnout – Minnesota, Wisconsin, Maine, New Hampshire, and Iowa – were all EDR states.\textsuperscript{11} And North Carolina, after having recently adopted the reform, boasted record turnout this past presidential election, with 253,000\textsuperscript{12} voters using same day registration, placing that state at number 19 in the nation after having been historically ranked among the worst 15 states for voter participation. That figure represents the biggest increase in voter turnout over all other states.

Election Day Registration unquestionably boosts overall voter turnout, but evidence suggests that it especially does so for traditionally low-turnout groups. If Maryland were to adopt EDR, overall turnout could go up by 4.3 percent.\textsuperscript{13} Plus, turnout among those aged 18 to 25 could increase by 9.1 percent, and for those who have moved in the last six months it could increase by 7.2 percent.\textsuperscript{14}

Given the national economic recession – and the skyrocketing increase in foreclosure rates – more and more Marylanders may find themselves moving. Census data show that over 35 million people in America moved between 2007 and 2008.\textsuperscript{15} Such figure represents a chunk of the population that legislators, and political candidates, simply can’t ignore, especially since many of those using EDR are changing addresses rather than voting for the first time.\textsuperscript{16}

EDR, moreover, is not a partisan issue. In 2008, most EDR voters in Iowa were “No-Party.” In states with EDR, then, all eligible citizens are potential voters to be courted by campaigners. The job falls to political parties to treat all eligible citizens as potential voters in order to secure their elections. One study shows that individuals are more likely to be contacted by a political party in EDR states, and that those contacted in EDR states are more likely to turn out and vote than in non-EDR states.\textsuperscript{17} Youth are especially impacted by this: “young citizens are more likely to be contacted by a political party in states with election day registration by an estimated 11 percentage points in presidential elections, and by an estimated 18 percentage points in midterm congressional elections.

This represents a key finding because when people are mobilized they are more likely to vote.”

(2) **EDR reduces the need for provisional ballots**

Administrative accidents happen. After the 2000 presidential election, in which upwards of three million Americans were turned away from the polls because of voter registration problems and registry flaws, the U.S. Congress passed the Help America Vote Act, requiring non-EDR states to offer provisional ballots to those citizens who believed they had registered but whose names didn’t appear on registration rolls. Use of provisional ballots, though, doesn’t ensure that every vote will count. In the following presidential election, in 2004, over one third of the nearly 2 million provisional ballots cast were not counted. In 2008, 2 million provisional ballots were again cast; only 1.44 million were counted.

One can imagine the disappointment a voter feels in finding out his vote did not count. Administrative error can’t be eliminated. And evidence exists that purgings and failures to input voter registration information abound: during the 2008 presidential election, several states – including Maryland – reported problems in transferring voter registration applications timely submitted to the MVA (an authorized voter registration agency under the National Voter Registration Act of 1993) to local elections officials in time for Election Day. Allowing eligible voters to register and vote on the same day would avoid the need to vote by provisional ballot, and save voters from the fear that their votes won’t count. Plus, as detailed below, EDR cuts down on much administrative work associated with counting these kinds of ballots.

**Addressing concerns about EDR**

Some have voiced concerns over EDR’s implementation. While it’s legitimate to worry about potential problems, the facts disprove any fears and show that EDR’s benefits far outweigh its negligible costs.

(1) **EDR does not lead to voter fraud**

Fraud is a non-issue in EDR states. In the 2008 general election, close to 550,000 people registered and voted using Election Day Registration in Minnesota. *Not one* of those votes was involved in any of the controversies surrounding the U.S. Senate-seat recount.

Elections administrators agree that EDR does not invite fraud. According to a Demos-conducted telephone survey of elections officials and poll workers, the great majority of respondents stated that current fraud-prevention measures suffice to ensure the integrity of elections.\(^{21}\) There’s no reason to think otherwise: states impose heavy penalties for voter fraud; voters are required to show documentation for proof of residency; and they must sign an oath attesting to their identity and citizenship. Unlike registration by mail, EDR requires eligible voters to attest to their identity face-to-face before an elections official. Audits conducted after an election add an additional level of identity verification – and those who get caught will certainly pay a penalty.

Current election procedures ensure against significant voter fraud. As a practical matter, few occurrences of voter fraud have occurred. An analysis of EDR states conducted by Lorraine Minnite, a professor at Barnard College of Columbia University, revealed that between 2002 and 2005 just one case of voter impersonation occurred at the polls nationwide.\(^{22}\) And when attorneys general from both New Hampshire and Wisconsin investigated Election Day votes from the 2004 election, neither found any fraud attributable to EDR.

\(\text{(2) EDR is a cost-effective means to increase voter participation}\)

Implementing EDR doesn’t require states to expend much money. In the last presidential election, Iowa’s Secretary of State spent less than a total of $40,000 for 99 counties. The single biggest cost incurred - $26,000 – was for producing a training video used statewide by auditors and precinct officials. An additional $9000 was spent on EDR precinct kits, including registration forms, oath forms, and instructions; and $1568 was spent on EDR information brochures. All in all, EDR was implemented in a cost-effective manner – one that could easily be duplicated.

The cost of EDR implementation for Iowa’s 99 counties was also minimal. On Election Day, many of the counties in Iowa hired an additional precinct official to handle EDR. The average cost in Iowa was about $100 per official; the state has 1774 precincts, so a total of $177,400 was spent for counties. The production of additional registration forms added a little more to the cost, so officials in the Secretary of State’s office estimate that the total cost for precincts was about $200,000 statewide – or around $2000 per county.

\(^{22}\) Demos: A Network for Ideas & Action, Election Day Registration: A Study of Voter Fraud Allegations and Findings on Voter Roll Security, available at http://www.demos.org/pubs/EDRVF.pdf (A 17 year-old in New Hampshire was caught casting his father’s ballot in a 2004 Republican presidential primary. This fraud was unrelated to EDR because the father was already registered and on the rolls.) Additionally, an initiative by the Department of Justice in prosecuting voter fraud has resulted in only 40 prosecutions nationwide for election crimes related to illegal voting between 2002 and 2005.\(^{22}\) Wisconsin was the only EDR state where a federal investigation led to any voter fraud prosecutions. Four voters were charged with double voting and 10 were charged for voting while disfranchised for a felony conviction. Charges against the “double voters” were dropped or exonerated, and only half the felon voters were convicted. Considering DOJ’s otherwise 90-percent conviction rate, such failure to convict – for a minute number of cases to begin with – provides strong evidence that voter fraud simply does not attend EDR.
The experience in Iowa is typical of the long-standing EDR states; one authoritative study indicates that elections are no more expensive to administer in EDR states than non-EDR states. Indeed, in a telephone survey conducted by Demos of local election officials in the EDR states of Idaho, Maine, Minnesota, New Hampshire, Wisconsin, and Wyoming, most respondents described the incremental cost of EDR as “minimal.” Where costs did exist, they were used for training and employing additional staff to help with registrations on Election Day and inputting data in the following days on the permanent voter registration rolls. Note, though, that respondents stated that EDR did not add work or expense but instead shifted the cost burden from one time and place to another. Rather than devoting time and resources to surges at the close of pre-Election Day registration, elections administrators shift these costs to Election Day and the days that follow, when inputting information is easier and not as time-sensitive.

Election Day Registration can also result in a decreased reliance on provisional ballots – a potential cost savings. Iowa’s use of provisional ballots in this presidential election was significantly reduced from the previous one. In 2004, Iowans cast 15,000 provisional ballots, compared with less than 5,000 in 2008. Even without factoring in this election’s higher voter turnout in Iowa, the state saw a 67% reduction in provisional ballots. Once states get used to EDR, their provisional ballot numbers may grow even smaller: in 2004, Wisconsin used only 374 provisional ballots; in 2008 it used 211. Wyoming used only 95 in 2004; that number reduced further to 56 in the following general election. Such reduction does away with the complicated post-election process of verifying registrations and/or sending notifications to those whose votes were not counted – a time-consuming and expensive task. Several elections officials claimed that EDR helped defuse confrontations with voters whose names were missing from the registration lists – the same people who would have to vote by provisional ballots. Without EDR, the clerk of a New Hampshire town of 30,000 said, “we’d have a lot of unhappy people” at the polls.

**Conclusion**

Passage of Election Day Registration will increase participation, ease problems at the polls, and occur without the problem of fraud. Such a reform – due to the ease with which it allows one to register and vote – promises to increase voters’ confidence in the electoral system and create the conditions in which they will be apt to vote again in elections to come. Maryland could become a model for the nation, and trailblaze the way for the rest of the states. Demos would applaud such a move.
